

## Description

Test the functionality of Duel Duo

## Links:

<https://github.com/LilOTechGod/BrightPath-Assesments>

## ***Test-Criteria:***

- Click on the see all bots button and all bots will appear below
- To start the game, click the **Draw** button. This will display five random robots. Users pick two and the computer will pick two.
- User's and computer robots will appear below in this order.
- My robots and the computer's robots duel each other.
- The winner is calculated by adding the robot's total health and attack damage and then subtracting the other robot's attack damage from the defender's health.
- Reloading the page will reset your wins and losses.
- The win and lost number will increment by 1 depending on whether the user or computer won the duel.

## ***Entry Criteria***

- Test criteria provided, from test description
- App up and running for testing
- Computer and stable internet connection.

## ***Exit-Criteria***

- All high priorities have passed.
- The allotted time is up.

## ***Additional Details:***

- Environment: Windows
- Bing is the recommended browser but should work on all browsers except for internet explorer.
