Bug Report for - The win and lost number will increment by 1 depending on whether the user or computer won the duel.

Description:

      When the user wins, the win count doesn't increment! Instead the losses count does but, when the user losses the losses count increments as expected.

Steps to Reproduce:

- Start Duel Duo game and play rounds until you win
- You win should appear on the screen if you won
- Scroll to leaderboard table and notice that the won count didn't increment

Expected result:

- After the user wins, the win count should be incremented.

Actual result:

- After the user wins the losses count increments which should not have instead the won count!

Environment:

- Operating system-Windows.
- Browser-Microsoft Edge.
